The invention describes an isolated peptide comprising a 476 amino acid sequence (S1) or its allelic variant, orthologue or fragment, where the allelic variant or orthologue is encoded by a nucleic acid that hybridises under stringent conditions to the opposite strand of a nucleic acid comprising a sequence having 2093 or 46649 base pairs, and the fragment comprises 10 contiguous amino acids of S1. The peptide is useful for preparing a composition for treating a disease or condition mediated

                                                                                                                                                                                                The invention relates to a new isolated nucleic acid comprising a sequence encoding a transporter protein (appearing as ADR03799) and appearing as ADR03799 (the cDNA) or ADR03800 (the gene). Also included are a vector comprising the isolated nucleic acid, a host cell containing the vector, producing the polypeptide, detecting the presence of the nucleic acid in a sample and an isolated human peptide having a sequence that shares at least 70% homology with ADR03799. The gene encoding the human transporter is located on chromosome 5. The peptide is useful for preparing agents for treating a disease or condition mediated by a human transporter protein. The present sequence represents the transporter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

Novel human transporter and ion channel polypeptides and polynucleotides for diagnosing, preventing or treating cell proliferative, transport, neurological, muscle and immunological disorders.

·Claim 1; Page 216-217; 253pp; English.

The invention discloses isolated polypeptides chosen from human transporter and ion channel polypeptides, TRICH 1-26, a biologically active or immunogenic fragment and the nucleic acids encoding them. Also disclosed are isolated antibodies raised against the TRICH proteins, methods for detecting a target polynuclectide in a sample and a microarray where at least one element is a TRICH polynuclectide. The proteins are useful for screening for agonists or antagonists, which can then be used for treating a disease or condition associated with corresponding for a compound that modulates the activity of the polypeptide or that binds to the polypeptide or as an immunogen for preparing or that binds to the polypeptides are useful for screening for compounds which alter expression of a target polynuclectide or for assessing to attibodies. The polyprotectides are useful for screening for compounds which alter expression of a target polynuclectide or for assessing toxicity of a test compound. The polypeptides, polynuclectides, contained and immunological disorders, such as amyotrophic lateral cherapy) and prevention of cell proliferative, transport, neurological, cancer, cardiac disorders, angina, Alzheimer's disease, prostate cancer, cardiac disorders, angina, Alzheimer's disease, amnesia, calcersis, cystic fibrosis, diabetes, parkinson's disease, metabolic disease of the central nervous system, developmental disorders of the central nervous system, cardiomyopathy, hypertension, asthma, Alds, allergies, anaemia,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  comprising a cDNA sequence encoding mouse tramdorin (tramd) 2, mouse tramd 3, human tramd 1, human tramd 2, human tramd 3 or rat tramd 1, or the genomic sequence of mouse tramd 1 or mouse tramd 3. Mouse tramd 1 is located to chromosome 11, whereas human tramd 1 is located to chromosome 5q31-33. The tramd sequences have neuroprotective, nootropic, analgesic and cerebroprotective activities, and can be used in gene therapy. The nucleic acid sequences are useful for diagnosing and treating central nervous system (CNS) disorders such as multiple sclerosis, nerve injury, neuropathic pain, stroke or trauma, and non-CNS disorders. The present "sequence represents human tramd 3, which is given in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                New nucleic acid sequence encoding tramdorins, e.g. mouse tramd 1, mouse tramd 3, human tramd 1, human tramd 2, human tramd 3 or rat tramd 1, useful for treating CNS, e.g. stroke, multiple sclerosis, trauma, neuropathic pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HNNETVILTPTMDSRLYMLSFLPFLVLLVFIRNLRALSIFSLLANITMLVSLVMIYQFIV

                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
assays, detection assays, predictive medicine, and in methods of treatment. NOVX is useful as immunogen, to screen for potential anti-degonist compounds, and as bait protein in a two-hybrid or three-hybrid assay. NOVX NA is useful in gene therapy, to express NOVX, to detect NOVX mRNA or a genetic lesion in a NOVX gene, and to modulate NOVX activity. The cell is useful for producing non-human transgenic animals. Ab is useful for isolating, and purifying NOVX and to monitor protein levels in tissue as part of a clinical testing procedure. The present sequence represents a NOVX protein
                                                                                                                                                                                                                                                                                                                                                                                                              260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        380

presence or amount of NOVX in a sample. NOVX is useful for identifying an agent that binds to NOVX. NOVX NO or ab is useful for identifying an agent that binds to NOVX. NOVX NO or ab is useful for treating concerned diabetes, cardiomyopathy, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, and various dyslipidaemias, metabolic disturbances associated with obesity, the metabolic syndrome X and wasting disorders associated with obesity, the metabolic syndrome X and wasting disorders associated with chronic disease, various cancers, endocrine, connective tissue, blood, vascular, skin, renal, bone, brain, muscle disorders, or bacterial, fungal, protozoal or viral, infections. NoVX NA or ab is useful in screening assays, detection assays, predictive medicine, and in methods of treatment. NoVX is useful as immunogen, to screen for potential confoundation or three-or hybrid assay. NOVX NA is useful in gene therapy, to express NOVX, to detect NOVX mRNA or a genetic lesion in a NOVX gene, and to modulate NOVX activity. The cell is useful in gene therapy, to express NOVX, to activity. The cell is useful in gene therapy, to express NOVX, to activity. The cell is useful in gene therapy, to express NOVX activity. The cell is useful in gene therapy to express NOVX activity. The cell is useful in gene therapy to express NOVX activity. The cell is useful in NOVX and to monitor protein to be sequence represents a NOVX protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     m

GABA and glutamate are neurotransmitters. The transporter can be used to produce specific antibodies, to screen for binding agents. Modulators of the transporter are useful for treating disorders associated with deregulated remaporter and utransport, e.g. asthma, amxiety, epilepsy, hypertension and other psychiatric and neurotic disorders, while determining levels of the transporter and its coding sequence can be used for diagnosis of such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

The invention describes an isolated peptide comprising a 476 amino acid sequence (S1) or its allelic variant, orthologue or fragment, where the allelic variant to rothologue is encoded by a nucleic acid that hybridises under stringent conditions to the opposite strand of a nucleic acid comprising a sequence having 2093 or 46649 base pairs, and the fragment comprises 10 contiguous amino acids of S1. The peptide is useful for preparing a composition for treating a disease or condition mediated by a human transporter protein. This is the amino acid sequence of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a new isolated nucleic acid comprising a sequence encoding a transporter protein (appearing as ADR03799) and appearing as ADR03799) and appearing as ADR03799 (the cDNA) or ADR03800 (the gene). Also included are a vector comprising the isolated nucleic acid, a host cell containing the vector, producing the polypeptide, detecting the presence of the nucleic acid in a sample and an isolated human peptide having a sequence that shares at least 70% homology with ADR03799. The gene encoding the human transporter is located on chromosome 5. The peptide is useful for preparing agents for treating a disease or condition mediated by a human transporter protein. The present sequence represents a homologue of the transporter protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antiinflammatory; neuroprotective; antianaemic; cytostatic; vulnerary inflammatory; haematopoiesis; immunity; neurodegenerative; stem cell; aplastic anaemia; cancer; wound healing; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VTFYSEGMSPLTIFKDALISILGFVGFVVGTYEALYELIRPSNAPIFINSTCAFI 434
                                                                                                                                                                                                                                                                                       Gaps
                              membrane
                     The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VTTFYSEGMSPLTIFKDALISILGFVGFVVGTYEALYELIQPSNAPIFINSTCAFI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Υ,

The invention relates to a novel isolated polynucleotide and the encoded polypeptide. The molecules of the invention demonstrate antinflammatory, neuroprotective, antianaemic, cytostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, haemacopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic protein of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the WIPO web-site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated nucleic acid sequence comprising a cDNA sequence encoding mouse tramdorin (tramd) 2, mouse tramd 3, human tramd 1, human tramd 2, human tramd 3 or rat tramd 1, or the genomic sequence of mouse tramd 1 or mouse tramd 3. Mouse tramd 1, or located to chromosome 11, whereas human tramd 1 is located to chromosome 5q31-33. The tramd sequences have neuroprotective, nootropic, analgesic and cerebroprotective activities, and can be used in gene therapy. The nucleic acid sequences are useful for diagnosing and treating central nervous system (CNS) disorders such as multiple sclerosis, nerve injury, neuropathic pain, stroke or trauma, and non-CNS disorders. The present sequence represents mouse tramd 3, which is given in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated nucleic acid sequence comprising a cDNA sequence encoding mouse tramdorin (tramd) 2, mouse tramd 3, human tramd 1, human tramd 3. Mouse tramd 1, contend 2, human tramd 3. Mouse tramd 1, or the genomic sequence of mouse tramd 1 or mouse tramd 3. Mouse tramd 1 is located to chromosome 5q31-33. The tramd sequences have neuroprotective, nootropic, analgesic and cerebroprotective activities, and can be used in gene therapy. The neuropathic gatemate are useful for diagnosing and treating central nervous system (CNS) disorders such as multiple sclerosis, nerve injury, neuropathic pain, stroke or trauma, and non-CNS disorders. The present sequence represents rat LYAAT-1, which is given in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      361 FFVSRAPEHCELVVDLFVRTVLVCLTCILAILIPRLDLVISLVGSVSSSALALIIPPLLE 420

GABA and glutamate are neurotransmitters. The transporter can be used to produce specific antibodies, to screen for binding agents. Modulators of the transporter are useful for treating disorders associated with deregulated glutamate/GABA transport. e.g. asthma, anxiety, epilepsy, hypertension and other psychiatric and neurotic disorders, while determining levels of the transporter and its coding sequence can be used for diagnosis of such

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

N;Alternate names: hypothetical protein N2185
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Accession: SS8251; S63041; S63953
K;Saiz, J.E.; Bultrago, M.J.; Soler, A.; del Rey, F.; Revuelta, J.L.
submitted to the EMBL Data Library, July 1995
A;Pescription: The sequence of a 21.3 Kb fragment from the left arm of yeast chromosome A;Reference number: S58246
A;Reference number: S58246
A;Reference number: S58246
A;Residues: 1-713 <SAI>A;Residues: 1-713 <SAI>A;Reference number: S63037
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        봈
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PI

                                                                                                                                                                                                                                           FUNCTION: Neutral amino acid/proton symporter. Has a pH-dependent electrogenic transport activity for small amino acids such as glycine, alanine and proline. Besides small amino acids, it also recognize their D-enantiomers and selected amino acid derivatives such as gamma-aminobutyric acid (By similarity). SUBCELLULAR LOCATION: Integral membrane protein. Lysosomal and plasma membrane (By similarity).

19-JUL-2005, sequence version 1.
07-FEB-2006, entry version 5.
Testis cDNA, clone: QtsA-14/98, similar to human solute carrier family 36 (proton/amino acid symporter), member 1 (SLC36Al),.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Copyrighted by the UniProt Consortium, see http://www.uniprot.org/terms Distributed under the Creative Commons Attribution-NoDerivs License
           in the efflux of lysosomal proteolysis products such as L-proline, Lalanine and glycine from the cell. May play a role in specifying sites for exceytosis in neurons.

SUBCELLULAR LOCATION: Integral membrane protein. Lysosomal and
                                                                                              plasma membrane. In neurons, colocalizes with the exocyst complex in the axonal processes.

TISSUE SPECIFICITY: Widely expressed and predominantly expressed in brain. Within the brain, expression restricted to neurons and not detected in glial cells. Abundant in regions rich in neurons using glutamate and GABA such as Purkinje cells in the cerebellum and pyramidal cells in the hippocampus.

SIMILARITY: Belongs to the amino acid/polyamine transporter 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MSTQRLRNEDYHDYSSTDVSPEESPSEGLNNLSSPGSYQRFGQSNSTTWFQTLIHLLKGN
